Subject: Maximum Lead Level in Tokens Produced by TokensDirect

All tokens produced by TokensDirect are guaranteed to contain Lead levels that are significantly less than the maximum level allowed for Metal Jewelry, currently defined to be 300 ppm (0.03%) by the Consumer Product Safety Commission (CPSC), until 8/24/2011. At that time the maximum allowable lead content will drop to 100 ppm (0.01%).

To make sure the CPSC standard is always met, TokensDirect requires all of their Metal suppliers to certify their metal meets a tightened standard of 90 ppm (0.009%) maximum lead content by weight. Any metal that arrives without this certification is not accepted.
